

GRYPHON

RANSOMWARE PROTECTION TOOLKIT

Redefining APT and Ransomware Protection

Designed to Complement EDR / XDR
with Multi-Layered Protection

**Behavioral
Ransomware
Detection**

Proprietary technology designed to detect, block, and recover from ransomware in real time

**Advanced
Threat
Protection**

500+ real-time detection rules mapped to MITRE ATT&CK tactics

**Endpoint
Isolation
& Forensics**

Rapid endpoint isolation and support for deep forensic investigation

Complete Defense & Response Capabilities

Agent-Based Solution for Multi-Layered Cyber Defense

Memory & LOLBins Protection:
Defend against process tampering and the misuse of legitimate system binaries

Executable Analysis:
Advanced analysis of suspicious and malicious executables

Incident Response Console:
Centralized control for incident response and operational orchestration

Vulnerability Management:
Continuous identification of unpatched and exploitable vulnerabilities

Seamless SOC Integration:
Extend visibility and response through integration with existing security

- 
-  Stop advanced attacks before they escalate
 -  Recover encrypted files with minimal disruption
 -  Detect lateral movement, persistence, and exfiltration attempts
 -  Strengthen zero-trust access and asset control
 -  Deploy across cloud and on-premises environments, with offline resilience

GRYPHON RPT

Protecting Critical Infrastructure from Sophisticated Cyber Threats

Advanced Detection. Rapid Response. Operational Resilience.
